The Mi-Plus is the solution for applications that require high watt densities (W/in²) and/or high operating temperatures. Mi-Plus band heaters are capable of temperatures up to 1400°F (760°C) and watt densities up to 150W/in² (23.25W/cm²). The recommended maximum watt density for a specific application will depend on the heater size and its operating temperature.

**SUPERIOR Clamping Mechanism**

The clamping brackets are formed from the outer sheath of the heater, providing a unique one-piece built-in construction strap. The clamping power is generated through barrel nuts and socket head screws, which as an integral part of the built-in strap, provide superior clamping force for maximum performance and optimal heater life. For details, see pages 1-12 and 1-13.

**INNOVATIVE Lead Terminations**

Smaller size Mi-Plus band heaters are powered-up by means of lead wire terminations. To insure a resilient connection that will withstand abrasion, mechanical abuse and keep contaminants out of the transition area, a specially designed stainless steel transition cap with a built-in strain relief was developed. The cap is welded to the sheath and the cavity is filled with insulating cement, sealing the band heater from contaminants. For details, see pages 1-16 through 1-19.

**UNBREAKABLE Power Screw Terminals**

Only Mi-Plus offers this unique screw terminal design... The stainless steel power screw terminals are resistant to over-torquing. For complete selection of screw terminal arrangements, see pages 1-14 and 1-15.

**UNIQUE Igloo™ Ceramic Covers**

To eliminate exposed wiring/screw terminals on band heater installations, single and double port ceramic caps were designed. These unique and exclusive Igloo ceramic terminal insulators fit over the entire terminal and lug, leaving no exposed wiring. For additional details on Igloo insulators, see page 1-15.
**PERFORMANCE RATINGS**

- **Maximum Temperature:** 1400°F (760°C)
- **Nominal Watt Density:**
  - Nozzle Bands — under 3" diameter: 30-100 W/in² (4.7-15.5 W/cm²)
  - Barrel bands — 3" and greater in diameter: 20-70 W/in² (3.1-10.9 W/cm²)
- **Maximum Watt Density:** 150 W/in² (23 W/cm²) Dependent on heater size, operating temperature and termination.

**ELECTRICAL RATINGS**

- **Maximum Voltage:** 480VAC per termination
- **Dual Voltage:** Available depending on heater configuration
- **Maximum Amperage:**
  - Lead wire termination: 10A
  - Screw terminations: 8-32 UNF — 20A
  - 10-32 UNF — 25A
- **Resistance Tolerance:** +10%, –5%
- **Wattage Tolerance:** +5%, –10%

Exposed electrical wiring on band heater installations is a violation of Electrical Safety Codes including O.S.H.A.

---

**PHYSICAL SIZE CONSTRUCTION LIMITATIONS**

- **Nominal Gap—Built-In Bracket:**
  - less than 1-3/4" dia.
  - 1-3/4" to 2" dia.
  - 2" to 5" dia.
  - 5" to 18" dia.
  - greater than 18" dia.

If a larger gap is required for probes or thermocouples, specify when ordering.

- **Maximum Inside Diameters:**
  - One-Piece ............. *14" (355.6 mm)
  - One-Piece Expandable .. *14" (355.6 mm)
  - Two-Piece ........... 25" (635.0 mm)

Over 25" (635.0 mm) will require multiple segments. Consult TEMPCO.

* Tempco recommends two-piece construction for heaters 10" ID and greater.

- **Standard Widths:** 1" to 8" (25.4 mm to 203.2 mm)
- **Width Tolerance:** ±3/32" (2.4 mm)

_If non-standard widths or tighter tolerances are required, consult Tempco._

---

**Additional Limitations**

- For heaters less than 4" in diameter, the maximum width is twice the diameter.
- Heaters with standard brackets are available from 1" to 8" wide, while heaters with low profile brackets are available from 1" to 6" wide.
- 1" diameter heaters are only available in 1" and 1-1/2" widths.
- For heaters from 10" diameter up to 25" diameter, Tempco recommends using 2-piece construction for superior clamping. Over 25" diameter, 3 or 4 segments are recommended.
- Combinations of some minimum and maximum variations may not be available. Consult Tempco with your special requirements.
- Post terminals are only available on heaters greater than 2-1/2" in diameter and 1-1/2" in width.
**Factors to be taken into consideration:**

A. Type of controls  
B. Voltage variations  
C. Machine cycling rate  
D. Type of resin being processed  
E. Coefficient of thermal expansion and conductivity of the cylinder.  
F. Designing a heater that closely matches the wattage requirement will decrease the frequency of cycling and temperature overshoot, thereby increasing the life of the heater.  

**Once these factors have been established, proceed with the following steps:**

1. Determine the maximum operating temperature.  
2. Calculate the total wattage required to obtain the maximum operating temperature.  
3. Determine the quantity and size of the heater bands to be used. Due to clamping concerns, 2" through 3" wide band heaters have long proven to be the most efficient and reliable in most cylindrical heating applications.  
4. Determine individual band heater wattage by dividing the total required wattage by the quantity of band heaters selected.  
5. Determine the band heater’s heated area by subtracting unheated (cold) areas created by screw terminals, gaps, holes, and cutouts.  
6. Check in the above graph that the calculated watt density does not exceed the maximum recommended watt density. Locate the maximum cylinder temperature required on the left-hand side of the graph, follow the horizontal line until it intersects with the line of the band heater being used, and read directly down to obtain the maximum recommended watt density (Watts/in²).  
7. If the calculated watt density is higher than the recommended value, it must be corrected or it will cause poor heater life. This can be accomplished by using more band heaters or lowering the heater wattage.  
8. Should you have a problem in selecting the proper band heater or establishing watt density for your application, consult Tempco.

**CORRECTION FACTORS**

- For heaters wider than 3" (76.2 mm), reduce maximum allowable watt density from chart by 20%.  
- For applications using insulating shroud, reduce maximum allowable watt density from chart by 25%.  
- Do not use insulating blankets if heater temperatures are above 1200°F (649°C). Failure to adhere will result in premature heater failure.
Mi-Plus® Band Heater Terminator Program

These Mi-Plus Band Heaters are in-stock, semi-finished (substrates), offering the option to finish them by choosing from the 6 program-qualified lead end terminations listed above.

Mi-Plus Terminator Band Heaters will be ready for shipment within 48 hours.

View Product Inventory @ www.tempco.com
**Stock Mi-Plus® Nozzle Band Heaters Available Through the Terminator Program**

Part Numbers listed are for Heaters with Type W2 Termination – Right-Angle Wire Braid Leads (12" leads, 10" SS braid). Other Terminator Program terminations and options can also be applied to stock heaters (see Ordering Information below).

**Ordering Information**

Order by Part Number for stock Mi-Plus heaters with Type W2 termination. Call Tempco for part numbers for stock heaters with other Terminator Program (see page 1-6) terminations and options.

**Custom Engineered/Manufactured**

Mi-Plus Heaters can be application specific; therefore for sizes, electrical ratings, terminations and any other design features not listed in this catalog TEMPCO will custom manufacture to your specifications. Consult us with your requirements.
### Custom Engineered/Manufactured Heaters

An electric heater can be very application specific; for sizes not listed TEMPCO will design and manufacture a Mi-Plus Barrel Heater to meet your requirements. **Standard lead time is 5 weeks.**

#### Please Specify the following:

- Inside Diameter
- Width
- Wattage
- Voltage
- Quantity
- Termination (see pages 1-14 through 1-21)
- Lead Cable/Braid Length
- Construction Style (see pages 1-10 and 1-11)
- Clamping Variation (see pages 1-12 and 1-13)
- Features/Options (see page 1-22)

**Stock Heaters**

Select a Mi-Plus Barrel Band Heater from the list above. Stock heaters can be modified to the following terminations:

- Type C—Outlet terminal box.
- Type P2—Low profile high temperature quick disconnect.
- Type C6, C7 and C8—Igloo™ ceramic terminal covers.

**Ordering Information**

Stock Mi-Plus Barrel Band Heaters are ready for immediate shipment with Screw Terminals. Complete termination details are on pages 1-14 and 1-15.

---

### Stock and Standard (Non-Stock) Mi-Plus Barrel Band Heaters

Part Numbers listed are for Heaters with Screw Terminal Terminations – Type T2 or T3X. Part numbers for heaters with other terminations will be assigned at time of order.

**Stock Items Are Shown In RED**

Throughout our catalog we show Tempco’s standard specifications and most popular designs. However, as a custom heating element manufacturer, we recognize that many applications require non-standard and unique designs.

At Tempco, we are constantly challenged by our customers to solve their heating applications. We have the experience, technical knowledge and manufacturing capability to solve all your heating problems with unique heater designs. Use Tempco’s talent and capabilities to your benefit to solve your specific heating problem in an expeditious and cost-effective manner.

The following pictures show some of the heater designs that we have developed for special applications. Next time, when you have a special application and you want someone to work with you and “think outside the box” to solve your specific heating application, call Tempco.

We haven’t seen all heating applications, but most likely our experienced staff has seen and solved more heating problems than you have seen.

Put our knowledge and experience to work for you. Challenge us! You will be glad you did.
Mi-Plus® Construction Styles

Do not open Non-Expandable One-Piece Mi-Plus Band Heaters during installation. Opening this construction style will cause internal damage.

Mi-Plus Band Heaters...

Note: Refer to page 1-4 for complete Limitations on Physical Size Construction.

Non-Expandable One-Piece Band Construction

One-piece heaters are the most efficient construction, as they provide the most heated surface area. This style can only be used where the entire heater can be slipped over the end of the barrel. One-piece heaters have built-in, full-width clamping bars.

Two-Piece Band Construction

Two-piece construction satisfies the need for a heater that can be placed anywhere along the machine barrel with a minimum of time and labor. Two-piece construction is recommended for larger diameter heaters because two-piece construction employs two sets of built-in clamps that deliver maximum clamping force.

The two-piece construction style also provides dual voltage capability. The heater halves may be wired together either in series or parallel, providing two voltage options. Two-piece heaters are rated at full voltage and 1/2 the total wattage for each half. On very large custom applications, Tempco may suggest going to multiple Mi-Plus heater segments with spring-loaded clamping.

One-Piece Expandable Band Construction

The expandable construction style allows the heater to be opened up and placed anywhere along the machine barrel, as well as minimizes the unheated area as compared to a two-piece heater.

With two heater circuits in a common case this heater naturally lends itself to a dual voltage system, a 240/480 volt package being the most common. When wired in parallel these heaters can run at 240 volts, and when wired in series, at 480 volts.

Expandable heaters are rated for each circuit at full voltage and one half of the total wattage.
Partial Coverage Band
2-Piece with Built-In Brackets

Partial coverage band heaters are required when an obstruction on the barrel would interfere with a full coverage band.

The preferred method of construction is the 2-piece Band Heater with Built-In Brackets as illustrated below. The heater is bolted down to the cylinder at the ends and the built-in low thermal expansion strap pulls the heater tightly against the cylinder being heated. The standard center of hole to edge of heater dimension is 1/4”.

When ordering, specify the angle of coverage from center to center of the mounting screw holes as shown.

Partial Coverage Band
1-Piece with Separate Strap

The alternate method of partial coverage construction is the 1-piece Band Heater with a separate 2-piece strap.

The 2-piece strap itself is bolted at the padded ends, allowing the heater to float between the pads as illustrated below. When tightening the strap, it will pull the heater against the cylinder being heated. The standard center of hole to edge of heater dimension is 1/4”.

When ordering, specify the angle of coverage from center to center of the mounting screw holes as shown.
Band Heaters

Clamping Variations

**Mi-Plus® Standard Built-In Clamping Strap**

The clamping brackets of the Mi-Plus Heater are formed from its outer sheath, producing a unique Built-In Strap. Clamping power is generated through barrel nuts and socket head cap screws, which are an integral part of the Built-In Strap.

High operating temperatures require superior clamping force to maintain ultimate contact between the inside diameter of the band heater and the barrel, which is essential for maximum heater operating life. Only Tempco’s Mi-Plus offers you this unique Built-In Strap feature.

**TOUGH IN EXTREME CONDITIONS**

Even under the most extreme conditions, the Built-In Strap Clamping will remain functional for the life of your Mi-Plus band heater. The steel clamping bars are the full width of the heater to distribute the forces evenly for superior heater contact. Tempco uses 1/4-20 alloy steel socket head cap screws to maximize the clamping power.

**Standard** on all Mi-Plus heaters 3” in diameter & larger

**Limitations**

- **Minimum Width:** 1-1/2” (38.1 mm)
- **Minimum Diameter:** 3” (76.2 mm)

</tbody>
</table>

Consult Tempco for multiple segment heaters.

---

**Mi-Plus Separate Clamping Straps**

The Mi-Plus is available without built-in brackets. This option uses a separate strap to properly clamp the heater. A separate strap is useful when clearance is limited or there is an obstruction. Separate straps are made strictly to customer specifications. Consult Tempco with your requirements.

<table>
<thead>
<tr>
<th>Bolt Size</th>
<th>Clearance</th>
<th>Suggested Diameter Range</th>
</tr>
</thead>
<tbody>
<tr>
<td>8-32</td>
<td>.50”</td>
<td>1/2” – 3”</td>

<td>.56”</td>
<td>2” – 6”</td>
</tr>
<tr>
<td>1/4-20</td>
<td>.62”</td>
<td>&gt; 3”</td>
</tr>
</tbody>
</table>

**Note:** The number of straps is dependent on heater width. Tempco recommends the use of the largest bolt size that clearance allows.

- **Type SB** — One-Piece Band
- **Type SS** — Two-Piece Band (Requires Minimum Heater Diameter of 3”)
- **Type SE** — One-Piece Expandable Band (Requires Minimum Heater Diameter of 3”)

Consult Tempco for multiple segment heaters.
Mi-Plus® Built-In Clamping Strap Variations

Mi-Plus Low Profile Built-In Clamping Strap

When space is limited use Tempco’s low profile clamping, a design that doesn’t sacrifice strength for size. This compact design uses 10-32 alloy socket head cap screws.

**Standard** on all Mi-Plus heaters less than 3" in diameter

**Limitations**
- Minimum Width: 1-1/2" (38.1 mm)
- Minimum Diameter: 1-3/8" (34.9 mm)

- Type LB — One-Piece Band
- Type LS — Two-Piece Band
- Type LE — One-Piece Expandable Band

Consult Tempco for multiple segment heaters.

Mi-Plus Outrigger Built-In Clamping Strap

This design is unique to 1" wide heaters from 1-3/8" diameter and greater. Two 8-32 alloy socket head cap screws are used to give 1" wide heaters the required clamping power.

**Standard** on Mi-Plus heaters 1" wide and 1-3/8" in diameter and greater.

- Type OB — One-Piece Band
- Type OS — Two-Piece Band

Consult Tempco for multiple segment heaters.

Mi-Plus Spring Loaded Built-In Clamping Strap

Spring loaded clamping with alloy steel socket head cap screws is standard on heaters over 8" in diameter and offered as an option on any heater with standard brackets. The extra heavy duty compression springs serve to combat thermal expansion of the heater by self adjustment, thereby ensuring excellent contact of the heater surface with the machine barrel or die. This type of clamping is also useful on heaters that are mounted vertically.

**Limitations**
- Minimum Width: 1-1/2" (38.1 mm)
- Minimum Diameter: 3-1/2" (88.9 mm)

- Type SL — One-Piece Band
- Type NSL — Two-Piece Band
- Type NEL — One-Piece Expandable Band

Consult Tempco for multiple segment heaters.

Mi-Plus Weld-On Bracket

The Mi-Plus is available without built-in brackets. For this option, brackets are welded onto the heater plate at user-specified locations. A weld-on bracket is useful when clearance is limited or there is an obstruction for using separate straps. Consult Tempco with your requirements.

**Limitations**
- Minimum Width: 1" (25.4 mm)
- Minimum Diameter: 1" (25.4 mm)

- Type WB — One-Piece Band
- Type WS — Two-Piece Band
- Type WE — One-Piece Expandable Band

**Note:** The number of weld-on brackets is dependent on heater width. Tempco recommends the use of the largest bolt size that clearance allows.
**Band Heaters**

**Terminations**

**Screw Terminals: Type T2, Type T3X & Type T3Y**

The specially designed Stainless Steel Power Terminals are internally connected to the heater and are resistant to over-torquing. The screw terminals are virtually unbreakable. Secure tightening of the electrical connections is essential for safety and long heater life.

**Mi-Plus Type T2 — Screw Terminals**

**One-Piece Band**

*Standard Termination Location:*
- opposite the gap; center of width

- **Minimum Inside Diameter:** 2-1/2" (63.5 mm)
- **Minimum Width:** 1-1/2" (38.1 mm)
- **Post Terminals:** 10-32 or 8-32
- **Maximum Volts/Amps:** 480VAC/25A (10-32) or 20A (8-32) each half

**Two-Piece Band**

*Standard Termination Location:*
- center of each half; center of width

- **Minimum Inside Diameter:** 3" (76.2 mm)
- **Minimum Width:** 1-1/2" (38.1 mm)
- **Post Terminals:** 10-32 or 8-32
- **Maximum Volts/Amps:** 480VAC/25A (10-32) or 20A (8-32) each half

**One-Piece Expandable Band**

*Standard Termination Location:*
- two sets of terminals opposite the gap; center of the width

- **Minimum Inside Diameter:** 2-1/2" (63.5 mm)
- **Minimum Width:** 1-1/2" (38.1 mm)
- **Post Terminals:** 10-32 or 8-32
- **Maximum Volts/Amps:** 480VAC/25A (10-32) or 20A (8-32) each half

**Mi-Plus Type T3X — Screw Terminals**

**One-Piece Band**

*Standard Termination Location:*
- opposite the gap; across center of width

- **Minimum Inside Diameter:** 2-1/2" (63.5 mm)
- **Minimum Width:** with 10-32 Post Terminals — 2-1/2" (63.5 mm) with 8-32 Post Terminals — 2" (50.8 mm)
- **Maximum Volts/Amps:** 480VAC/25A (10-32) or 20A (8-32) each half

**Two-Piece Band**

*Standard Termination Location:*
- center of each half; across center of width

- **Minimum Inside Diameter:** 3" (76.2 mm)
- **Minimum Width:**
  - w/ 10-32 Post Terminals — 2-1/2" (63.5 mm)
  - w/ 8-32 Post Terminals — 2" (50.8 mm)
- **Maximum Volts/Amps:** 480VAC/25A (10-32) or 20A (8-32) each half

**One-Piece Expandable Band**

*Standard Termination Location:*
- two sets of terminals opposite the gap; across center of width

- **Minimum Inside Diameter:** 2-1/2" (63.5 mm)
- **Minimum Width:**
  - w/ 10-32 Post Terminals — 2-1/2" (63.5 mm)
  - w/ 8-32 Post Terminals — 2" (50.8 mm)
- **Maximum Volts/Amps:** 480VAC/25A (10-32) or 20A (8-32) each half

*Only Tempco’s Mi-Plus has these unique Torque-Resistant Power Terminals.*

Two-Piece Band

Standard Termination Location:
next to same gap on each half;
across center of width

✻ Minimum Inside Diameter: 3" (76.2 mm)
✻ Minimum Width:
  with 8-32 Post Terminals — 2" (50.8 mm)
  with 10-32 Post Terminals — 2-1/2" (63.5 mm)
✻ Maximum Volts: 480VAC each half
✻ Maximum Amps: 25A (10-32) or 20A (8-32) each half

Note: Type T3Y is not available on
One-Piece or One-Piece Expandable
Mi-Plus Band Heaters

Optional Igloo™ Ceramic Covers for Heaters with Screw Terminals

Igloo™ ceramic terminal covers consist of two individual ceramic parts. With a
tight-fitting cap and a solid base, an Igloo will fully insulate any standard #8 or #10
terminal lug used for electrical wiring hookups. Igloos can be assembled onto any
standard Mi-Plus Band with 8-32 or 10-32 screw terminals. Igloo Double Port 90°
are recommended on expandable heaters with Type T3X Termination. Igloo Double
Port In-Line will not fit on expandable heaters with Type T3X termination.

Minimum Inside Diameter: 2-1/2" (63.5 mm)
Minimum Width: 2-1/2" (63.5 mm)

Three types of Igloo™ bases are available:
  Type C6 — Double Port In-Line P/N CER-101-104
  Type C7 — Double Port 90° P/N CER-101-106
  Type C8 — Single Port P/N CER-101-107

Igloo™ caps are available in the three screw terminal sizes:
  10-32 — P/N CER-102-101
  10-24 — P/N CER-102-104
  8-32 — P/N CER-102-105

When ordering, specify the type of Igloo and the screw
terminal size.

Exposed electrical wiring on band heater installations is a
violation of Electrical Safety Codes including O.S.H.A.
Band Heaters

Terminations

Mi-Plus® Type W1 — Abrasion Resistant Straight Wire Braid Leads

The lead wires exit straight out through a stainless steel eyelet. Flexible stainless steel wire braid leads are highly recommended for improved abrasion resistance. Wire braid leads offer sharp bending not possible with armor cable.

One-Piece Band

Standard Termination Location:
opposite the gap; center of width

- Minimum Inside Diameter: 1” (25.4 mm)
- Minimum Width: 1” (25.4 mm)
- Maximum Volts: 480VAC
- Maximum Amps: 10

Two-Piece Band

Standard Termination Location:
center of each half; center of width

- Minimum Inside Diameter: 3” (76.2 mm)
- Minimum Width: 1” (25.4 mm)
- Maximum Volts: 480VAC each half
- Maximum Amps: 10 each half

One-Piece Expandable Band

Standard Termination Location:
two sets of leads opposite the gap; center of width

- Minimum Inside Diameter: 2-1/2” (63.5 mm)
- Minimum Width: 1-1/2” (38.1 mm)
- Maximum Volts/Amps: 480VAC/10A each half

This stainless steel braid is loosely wrapped around two mica insulated lead wires rated for 842°F (450°C). The standard leads are 10° of stainless steel loose wire braid over 12° of flexible leads. If longer leads are required, specify when ordering.

Mi-Plus Type W2 — Right-Angle Wire Braid Leads, 90 Degrees to Heater Diameter

This style of wiring is the most prevalent for nozzle band heaters, as it contributes to the most flexible and space saving installation. Mica insulated lead wires rated for 842°F (450°C) with tightly wrapped stainless steel overbraid are used, providing protection in abrasive environments. The stainless steel braid exits parallel to the heater centerline through a low profile stainless steel cap. This cap also acts as a strain relief, guarding against excessive flexing or pulling of the lead wire.

One-Piece Band

Standard Termination Location:
opposite the gap; near edge of width

- Minimum Inside Diameter: 1” (25.4 mm)
- Minimum Width: 1” (25.4 mm)
- Maximum Volts: 480VAC
- Maximum Amps: 10

Two-Piece Band

Standard Termination Location:
center of each half; near edge of width

- Minimum Inside Diameter: 3” (76.2 mm)
- Minimum Width: 1” (25.4 mm)
- Maximum Volts/Amps: 480VAC/10A each half

This termination style is located 180° from the gap for one-piece heaters and 90° from the gap for two-piece heaters and exits the heater near the edge. By keeping the lead wires away from the heater, less damage from high temperature contact is likely to occur.

The standard leads are 10° of stainless steel wire braid over 12° of flexible leads. If longer leads are required, specify when ordering.

View Product Inventory @ www.tempco.com
**Band Heaters**

**Mi-Plus® Type W5 — Right-Angle Wire Braid Leads, 90 Degrees to Heater Width**

The stainless steel braid exits parallel to the heater surface through a low profile stainless steel cap, which also acts as a strain relief guarding against excessive flexing or pulling of the lead wire. Mica insulated lead wires rated for 842°F (450°C) with tightly wrapped stainless steel over-braid are used, providing protection in abrasive environments.

This low-profile termination is convenient where space limitations are a concern.

The standard leads are 10” of stainless steel wire braid over 12” of flexible leads. *If longer leads are required, specify when ordering.*

**One-Piece Band**

**Standard Termination Location:**
- opposite the gap; center of width
- *Minimum Inside Diameter:* 1” (25.4 mm)
- *Minimum Width:* 1” (25.4 mm)
- *Maximum Volts:* 480VAC
- *Maximum Amps:* 10

**Two-Piece Band**

**Standard Termination Location:**
- center of each half; center of width
- *Minimum Inside Diameter:* 3” (76.2 mm)
- *Minimum Width:* 1” (25.4 mm)
- *Maximum Volts:* 480VAC each half
- *Maximum Amps:* 10 each half

**Mi-Plus Type R1 — Abrasion Resistant Straight Armor Cable**

Stainless steel armor cable provides vastly superior lead wire protection in cases where abrasion is a constant problem. The lead wires are mica insulated and rated for 842°F (450°C).

The standard leads are 10” of stainless steel armor cable over 12” lead wire. *If longer leads are required, specify when ordering.*

**One-Piece Band**

**Standard Termination Location:**
- opposite the gap; center of width
- *Minimum Inside Diameter:* 1” (25.4 mm)
- *Minimum Width:* 1” (25.4 mm)
- *Maximum Volts:* 480VAC
- *Maximum Amps:* 10

**Two-Piece Band**

**Standard Termination Location:**
- center of each half; center of width
- *Minimum Inside Diameter:* 3” (76.2 mm)
- *Minimum Width:* 1” (25.4 mm)
- *Maximum Volts/Amps:* 480VAC/10A each half

**One-Piece Expandable Band**

**Standard Termination Location:**
- two sets of leads opposite the gap; center of width
- *Minimum Inside Diameter:* 2-1/2” (63.5 mm)
- *Minimum Width:* 1-1/2” (38.1 mm)
- *Maximum Volts/Amps:* 480VAC/10A each half

**Band Heaters**

**Terminations**

**Mi-Plus® Type R2B — Abrasion Resistant Right-Angle Armor Cable**

One-Piece Band
- **Standard** Termination Location: opposite the gap; center of width
- Minimum Inside Diameter: 1" (25.4 mm)
- Minimum Width: 1" (25.4 mm)
- Maximum Volts/Amps: 480VAC/10A each half

Two-Piece Band
- **Standard** Termination Location: center of each half; center of width
- Minimum Inside Diameter: 3" (76.2 mm)
- Minimum Width: 1" (25.4 mm)
- Maximum Volts/Amps: 480VAC/10A each half

One-Piece Expandable Band
- **Standard** Termination Location: two sets of leads opposite the gap; center of width
- Minimum Inside Diameter: 2-1/2" (63.5 mm)
- Minimum Width: 1-1/2" (38.1 mm)
- Maximum Volts/Amps: 480VAC/10A each half

**Stainless Steel Right-Angle Armor Cable** will provide excellent lead wire protection. This space saving termination will give long-term abrasion protection. The lead wires are mica insulated and rated for 842°F (450°C).

The standard leads are 10" of stainless steel armor cable over 12" of lead wire. **If longer leads are required, specify when ordering.**

**Mi-Plus Type R2H — Abrasion Resistant Right-Angle Armor Cable for Type HTL Lead Wire**

**High Temperature Termination:** 1022°F (550°C)

**Special SS Right-Angle Fitting**

**3-Conductor Wire**

One-Piece Band
- **Standard** Termination Location: opposite the gap; center of width
- Minimum Inside Diameter: 1-1/2" (38.1 mm)
- Minimum Width: 1" (25.4 mm)
- Maximum Volts/Amps: 480VAC/10A

Two-Piece Band
- **Standard** Termination Location: center of each half; center of width
- Minimum Inside Diameter: 3" (76.2 mm)
- Minimum Width: 1" (25.4 mm)
- Maximum Volts/Amps: 480VAC/10A each half

One-Piece Expandable Band
- **Standard** Termination Location: two sets of leads opposite the gap; center of width
- Minimum Inside Diameter: 2-1/2" (63.5 mm)
- Minimum Width: 1-1/2" (38.1 mm)
- Maximum Volts/Amps: 480VAC/10A each half

Mi-Plus® Type C — General Purpose Terminal Box

General purpose terminal boxes are a simple & economical way to protect employees from electric shock or prevent electric shorts that can result from exposed wiring on band heater electrical installations.

The Heavy Duty Stainless Steel Terminal Box has a 1/2" trade size knockout (actual diameter 7/8") that will accept standard armor cable connectors. To simplify installation, Mi-Plus band heaters with terminal boxes can be pre-wired.

**Type CA** – Box only (shown)
**Type CD** – Box with prewired SS wire braid
**Type CC** – Box with prewired SS armor cable
**Type CE** – Box with prewired plain leads

The standard abrasive protection leads are 10" of protection over 12" of flexible leads. The standard lead length for plain leads is 10" long. If longer leads are required, specify when ordering.

### Two-Piece Band

**Standard** Termination Location:
- center of each half; center of width

- Minimum ID: 3" (76.2 mm)
- Minimum Width: 2" (50.8 mm)
- Maximum Volts/Amps: 480VAC/25A each half

### One-Piece Band

**Standard** Termination Location:
- opposite the gap; center of width

- Minimum Inside Diameter: 1" (25.4 mm)
- Minimum Width: 1" (25.4 mm)
- Maximum Volts/Amps: 480VAC/10A

**Note:** Plain wire leads do not offer protection against contamination or abrasion.

### One-Piece Expandable Band

**Standard** Termination Location:
- opposite the gap; center of width

- Minimum Inside Diameter: 2-1/2" (63.5 mm)
- Minimum Width: 1-1/2" (38.1 mm)
- Maximum Volts/Amps: 480VAC/10A each half

### Two-Piece Expandable Band

**Standard** Termination Location:
- opposite the gap; center of width

- Minimum Inside Diameter: 3" (76.2 mm)
- Minimum Width: 2" (50.8 mm)
- Maximum Volts/Amps: 480VAC/25A each half

---

Mi-Plus Type L1 — Plain Wire Leads

Plain wire leads are available on all construction styles. The lead wires exit straight out through a stainless steel eyelet. High-temperature 842°F (450°C) mica insulated lead wire is standard. The standard lead length is 10" long. If longer leads are required, specify when ordering.
**Band Heaters**

**Terminations**

**Mi-Plus® Type P1 — High Temperature Quick Disconnect Plugs**

High Temperature Quick Disconnects are a simple, safe and quick way to apply power to a band heater installation. The combination of plug and cup assembly along with stainless steel armor cable or stainless steel wire braid eliminates all live exposed terminals or wiring that can be a potential hazard. The assembly is available with a straight or right-angle plug. To simplify installation, Mi-Plus band heaters with Quick Disconnects can be pre-wired with stainless steel armor or stainless steel wire braid.

- **P1A** — Cup Assembly only
- **P1B** — Cup Assembly with straight plug
- **P1C** — Cup Assembly with 90° plug
- **P1E** — Cup Assembly with straight plug and stainless steel armor cable
- **P1F** — Cup Assembly with straight plug and stainless steel wire braid
- **P1H** — Cup Assembly with 90° plug and stainless steel armor cable
- **P1J** — Cup Assembly with 90° plug and stainless steel wire braid

The standard abrasive protection leads are 10" of protection over 12" of flexible leads. *If longer leads, armor cable or braid are required, specify when ordering.*

**One-Piece Band**

*Standard Termination Location:*

- Minimum Inside Diameter: 3" (76.2 mm)
- Minimum Width: 2" (50.8 mm)
- Maximum Volts: 250VAC
- Maximum Amps: 16
- Maximum Temperature: 572°F (300°C)

**Two-Piece Band**

*Standard Termination Location:*

- Minimum Inside Diameter: 3" (76.2 mm)
- Minimum Width: 2" (50.8 mm)
- Maximum Volts: 250VAC each half
- Maximum Amps: 16 each half
- Maximum Temperature: 572°F (300°C)

*Note:* Type P1 is not available on One-Piece Expandable Mi-Plus Band Heaters

View Product Inventory @ www.tempco.com
This lower profile terminal box and high temperature quick disconnect plug assembly offers a solution where clearance is a problem. The combination of plug and cup assembly along with stainless steel armor cable or stainless steel wire braid eliminates all live exposed terminals or wiring that can be a potential hazard.

The assembly is available with straight plug only. To simplify installation, Mi-Plus band heaters with Quick Disconnects can be pre-wired with stainless steel armor or stainless steel wire braid.

- **P2A** — Box and Cup only
- **P2B** — Box and Cup with straight plug
- **P2D** — Box and Cup with straight plug and stainless steel armor cable
- **P2E** — Box and Cup with straight plug and stainless steel wire braid

The standard abrasive protection leads are 10" of protection over 12" of flexible leads.

*If longer leads, armor cable or braid are required, specify when ordering.*
**Band Heaters**

**Features/Options**

### Thermocouple Coupling

The Thermocouple Coupling facilitates the installation of an external thermocouple with a threaded fitting. The standard location for the coupling is 90° from the gap at the center of the width. Specify without through hole for heater sensing or with through hole for load sensing.

The bushing sizes available are:

<table>
<thead>
<tr>
<th>Thread</th>
<th>D</th>
<th>H</th>
</tr>
</thead>
<tbody>
<tr>
<td>1/8-27 NPT</td>
<td>9/16&quot;</td>
<td>5/8&quot;</td>
</tr>
<tr>
<td>1/4-20 NPT</td>
<td>3/4&quot;</td>
<td>11/16&quot;</td>
</tr>
<tr>
<td>3/8-18 NPT</td>
<td>7/8&quot;</td>
<td>5/8&quot;</td>
</tr>
<tr>
<td>M12-1.75mm</td>
<td>3/4&quot;</td>
<td>1/2&quot;</td>
</tr>
</tbody>
</table>

**Note:** The minimum heater width with a coupling is 1-1/2". If heater width is smaller than 1-1/2", heater gap will be used for coupling location.

### Thermocouple Bayonet Adapter

A standard Bayonet Adapter facilitates the installation of an external thermocouple with a standard bayonet cap. The standard location for the adapter is 90° from the gap.

Refer to pages 14-3 and 14-4 for a complete selection of thermocouples available from stock.

**Note:** The minimum heater width with a T/C adapter is 1-1/2". If heater width is smaller than 1-1/2", heater gap will be used for T/C location.

### Built-In Thermocouple

A built-in thermocouple can be factory installed on Mi-Plus band heaters. ANSI type J or K thermocouples are available on Type L1, R1 R2, W1, W2 and W5 lead wire terminations. Thermocouple junction is located inside the exit termination stamping, providing a relative heater temperature.

Thermocouple can be located in various positions on the heater. Consult Tempco with your requirements.

### Stock Heavy Duty Quick Disconnect Plugs and Connectors

Heaters with pre-wired plugs allow quick and easy installation of the heater. These plugs can be attached to armor cable or stainless steel wire braid.

For other types of plugs, consult Tempco or specify the manufacturer’s part number when ordering.

See page 15-15 for additional Twist-Lock electrical plugs.

**View Product Inventory @ www.tempco.com**
Installation

1. Disconnect electric power to the machine and/or heaters prior to installing or replacing heaters.
2. Do not install heaters in areas where combustible gases, vapor or dust is present.
3. Use as many narrow band heaters as the application will permit; 2” through 3” wide heaters are recommended.
4. Using a heater that closely matches the wattage requirements will decrease the frequency of cycling and temperature overshoot, thereby increasing the life of the heater.
5. Make certain that all barrel surfaces are clean and have a smooth finish. Any contaminants or imperfections on the surface can cause premature heater failure.
6. Tempco expandable type Mi-Plus Band Heaters may be opened once at the gap, to fit on the barrel. Do not open these heaters beyond their specified heater diameter.

   **CAUTION**
   Do not open Tempco One-Piece Non-Expandable Type Mi-Plus Band Heaters. Opening of these heaters can cause internal damage.

7. Position heater bands on the barrel.
8. Securely tighten heater bands around the barrel. Clamping force must be equally distributed on heaters with more than one set of clamping brackets.

   **Recommended Clamping Bolt Torque:**
   10 ft./lbs. (13.6 Newton/meters)

9. For heaters with screw terminals, remove the top nut and flat washers from the power screw terminals. Do not remove or loosen the bottom nut on the power screw terminals. The bottom nut is tightened to 60 inch/lbs. at our factory. A loose bottom nut will create an internal high resistance connection and will result in premature heater failure.

   **Installation Accessories Available**

   **IMMEDIATE DELIVERY!**
   - High Temperature Terminal Lugs
   - Igloo Ceramic Insulating Covers
   - UL Listed Plugs
   - High Temperature Lead Wire 842°F (450°C)
   - Armor Cable
   - Stainless Steel Braid
   - High Temperature Sleeveing
   - High Temperature Mica Insulated Wiring Harnesses 842°F (450°C)
   - High Temperature Mica Insulated Wiring Harnesses 1022°F (550°C)
   - Thermocouples
   - Temperature Controllers
   - High Temperature Fiberglass Tape

   *All Items Available from Stock*

10. All electrical wiring of heater bands should be done by a qualified electrician.

   a. Use only Stainless Steel or other high temperature lugs to prevent material degradation when exposed to high temperatures over a prolonged period of time.

   **CAUTION**
   **DO NOT USE COPPER OR PLATED COPPER LUGS.**

   b. Heaters must be wired using the proper gauge wire with a minimum temperature rating of 842°F (450°C). All Mi-Plus Heaters supplied with lead wire terminations or factory pre-wired screw terminals use mica insulated lead wires rated to 842°F (450°C). **Never allow lead wires to lie directly on the heater surface.**

   c. When connecting power leads to screw terminals make certain that barrels of terminal lugs are not facing down toward the heater case, which will create a short circuit.

   **Recommended Screw Terminal Torque:**
   30 in./lbs. (3.4 Newton/meters)

   d. Make certain power lead wires do not make contact with hot heater surfaces to avoid degradation of lead wire, as this can cause electrical short circuits.

   e. Make sure the voltage input to the heater bands does not exceed the voltage rating that is stamped on the heater bands.

   f. It is recommended that an amperage reading is taken for each heater to verify proper wiring. (Amps = Watts/Volts)

11. Insulate all live electrical wires per applicable safety standards.

   a. Energize heater bands and allow the heater sheath to reach 400°F (usually 3–5 minutes).

   b. Turn power off and immediately re-tighten the Mi-Plus Bands to 10 ft./lbs. Turn power on.

13. Install shrouds around the machine to meet applicable safety requirements.

14. Once installed, check surroundings to make sure that contaminants won’t get on the heater while the unit is in operation. Accumulation of contaminants on heaters can cause premature heater failure.

15. Insulating blanket installations must have band heater retightening sequence (#12) completed before blanket installation. Lead wires must exit the insulation blanket as soon as possible; do not entrap lead wires between heater sheath and insulation blanket.

   **Notice**
   It is imperative that upon start-up of new machines at customer facilities, all of the aforementioned parameters are double checked by qualified field service personnel.

**Exposed electrical wiring on band heater installations is a violation of Electrical Safety Codes including O.S.H.A.**
